

SERVICE LINES THREE INCHES AND LARGER

GENERAL

The service line and meter will be sized in accordance with the requirements of the design criteria and approved by the Water Works Superintendent. Meters shall be installed in masonry pits constructed specifically for the purpose. General pit construction details are shown on Standard Drawing WW-135 thru WW-136; General Piping Arrangements and Requirements are shown on Standard Drawings WW-137 thru WW-144.

MATERIALS

Specific material requirements are noted on the respective Standard Drawing.

INSTALLATION

Construction of service lines and appurtenances shall conform to the requirements of the applicable department specification. Detailed dimensioned drawings of the proposed installation shall be furnished to the Water Works Superintendent for his/her approval. The drawings shall include the makes, models, and details of all the components proposed to be used.
